EXPERIENCE

Arcanna.ai | Software Engineer

Feb 2024 – Present

Full-time

Bucharest, Romania (Hybrid)

- Core contributor to introducing **generative AI** into the platform, building the software layer end to end with **Google ADK**, from an in-product assistant to **agentic workflows**, including both the authoring framework and the agents themselves.
- Deployed and managed **self-hosted LLMs** across on-premise and fully **air-gapped** client environments using **vLLM** and **Docker**, handling model selection, serving and ongoing operation without external dependencies.
- Designed and implemented a **retrieval-augmented generation (RAG)** system from scratch, covering document ingestion with **Docling** through indexing, retrieval and response generation on **Elasticsearch**.
- Co-led a full revamp of the application's frontend in **TypeScript**, **React** and **Material UI**, significantly improving UI/UX and performance.
- Owned large features end to end across the stack (data pipelines, **REST APIs**, research and prototyping), including work delivered on-site in client-restricted environments.

iBac | Co-Owner & Software Engineer

May 2023 – Oct 2025

Self-employed

Bucharest, Romania (Hybrid)

- Co-owner and engineer of a top-rated educational app, **5-star** rated on both Android and iOS.
- Grew the product to **30,000+ monthly active users** and over **250,000 accounts** created.
- Reached **#1 in the Education category** on both the App Store and Google Play multiple times.
- Drove architectural decisions and feature brainstorming, ensuring consistent delivery of a high-quality product.

Capgemini Engineering | Intern, then Junior Software Engineer

Jul 2022 – May 2023

Full-time

Cluj-Napoca, Romania (Remote)

- Initiated and delivered projects from inception, using **Docker** for containerization and setting up **CI/CD pipelines** for deployment and testing.
- Developed, documented and tested **RESTful APIs**, enabling seamless collaboration with the frontend team.
- Processed and filtered substantial volumes of data from data engineering teams into comprehensible, industry-standard APIs.

EDUCATION

University of Bucharest | MSc, Artificial Intelligence

2024 – 2026

Full scholarship, performance group

Bucharest, Romania

University of Bucharest | BSc, Computer Science

2021 – 2024

Full scholarship, performance group

Bucharest, Romania

PROJECTS

RoCar | Car Price Predictor based on Machine Learning

Mar 2024 – Jun 2024

Bachelor thesis | github.com/hutanmihai/bachelor-thesis

- This thesis introduces a **production-grade web application**, tailored for the Romanian automotive market, designed to predict vehicle prices.
- RoCar utilizes a model specialized in Romania's economy and pricing, trained on data we have **independently scraped**.
- The application stands out by using both **structured data** (year of production, manufacturer, model, options) and information from **images and descriptions**, leveraging a **self-made multimodal architecture** for more accurate predictions.

SKILLS

Languages: Python, TypeScript/JavaScript, SQL

AI/ML: PyTorch, scikit-learn, OpenCV, pandas, NumPy, Google ADK, vLLM

Tools: Docker, Git, FastAPI, React, Next.js, PostgreSQL, Elasticsearch, Pytest

Concepts: Deep Learning, Machine Learning, NLP, Computer Vision, RAG
